

PCI DSS Services

Safeguard customer credit card information and strengthen your organisation's ability to process payments securely with PCI DSS compliance.

The Payment Card Industry Data Security Standard (PCI DSS) guides organisations on the steps to take in order to safeguard customers' valuable credit card information.

Ideal for

Any organisations that accept, process or transmit cardholder payment data irrespective of an organisation's size or the number of transactions processed.

How we deliver

In person onsite, and remote.

Why PCI DSS with CyberCX?

CyberCX is a registered PCI Qualified Security Assessor (QSA) and is one of a select group of organisations registered with the PCI Security Standards council to carry out PCI Report on Compliance.

PCI DSS compliance is all about protecting your customers from fraud and your business from expensive or damaging data breaches. So, it's essential you have the right team assisting you throughout the process.

We offer a full range of services to assist organisations in both working towards compliance and assessing compliance against the PCI DSS.

Organisational benefits:

Improving Your Security Posture

PCI DSS compliance provides a security framework that helps secure your critical data and lessens the likelihood of a security incident.

Safeguarding E-Commerce Operations

Maintaining certification safeguards your rights to accept credit card payments through your acquiring bank and preserves the core of your online shopping operation.

Maintaining Trust and Reputation

PCI DSS certification helps your organisation maintain trust and reputation, whilst meeting the data security requirements needed to maintain partner and customer relationships.

With comprehensive guidance we deliver these services and functions:

▶ **PCI DSS Scope Identification and Compliance Action Plan**

Our technical consultants will help you identify the right SAQ (self-assessment questionnaire) to complete and will ensure the information you provide is accurate and complete to achieve full PCI DSS compliance.

▶ **PCI DSS Gap Analysis**

A Gap Analysis with a CyberCX expert provides an assessment of how compliant your organisation is with the PCI DSS. It enables you to accurately understand what you need to do in order to become compliant and the risk areas you need to address.

▶ **PCI DSS Implementation and Remediation**

Our qualified team will work with you to complete a prioritised approach to PCI DSS and remediate the findings of a gap assessment report. These remedial actions may include scope reduction, system architecture changes, policy and process creation and capability building.

▶ **Formal Assessment**

CyberCX can carry out a formal test and attestation of compliance with the standard required by payment card brands and acquiring banks. This is a detailed and thorough audit of card processing, storage and transmission practices within the organisation. We perform this review in accordance with the procedures laid out by the PCI Security Standards Council.

▶ **Outsourced PCI DSS Management**

Managing PCI-DSS compliance is a full-time function which your organisation may not have the time or expertise to do. CyberCX offer a fully outsourced

PCI DSS Service which takes the burden and risk away from your organisation in a cost effective way. Our qualified consultants will become part of your team ensuring that once compliance is achieved it can be maintained through on-going testing and assessments.

PCC DSS experts you can rely on
